## AIR ROOT POT

---

Air Root Pot is excellent for transplanting seedlings and cuttings. Plants can be kept for one to two seasons before transplanting into a larger pot, or directly in the garden.

Air Root Pot is circular in shape with a perforated sidewall. There are no flat surfaces due to the inward and outward pointed cones, which eliminates any chance of starting the spiraling process as well as dramatically increases growth rates.

## FEATURE

- ◆ Be made of plastic.
- ◆ Eliminates root circling.
- ◆ Minimizes the need to transplant.
- ◆ Reduces the chance for overwatering.
- ◆ Reduces growing time in the garden, increases yields.
- ◆ Ensures superior performance in extremes of weather.
